

The Damage Report: Wildfires

As we have seen in the recent years, wildfires are more common than you think. And if you think they're only reserved for the Northwest, think again – they can occur all across the country.

Real risks

- ▶ **58,250** wildfires burned more than **10.3 million acres** in 2020, more than any other year on record.
- ▶ **60,000,000** homes were within a mile of a wildfire from 1992-2015.
- ▶ In 2019, 3 of the top 4 states for highest number of wildfires included **Texas, North Carolina and Georgia**.

High-impact areas

- High wildfire activity**
- Moderate wildfire activity**
- Low wildfire activity**

Damage can be costly.

Wildfires caused **\$6 billion** in uninsured losses in 2018. Today, millions of Americans face greater exposure and risk due to:

- ▶ **Increased development** in high-risk regions.
- ▶ **High cost of living** pushing people out of urban areas and into rural communities.

You may not be covered.

For homeowners who live in high-risk areas, wildfires will **most likely not be covered**. Insurance companies are known to **refuse coverage** for residences near forested areas.

Fill the gap!

Recoop Disaster Insurance picks up where your typical home insurance leaves off. It's a lightning-fast, lump-sum cash benefit (up to \$25,000) to help pay for damage caused by a wildfire. Learn more at **RecoopInsurance.com** or contact your benefits representative.
